

ALIProWeb™ Service Offering

(Effective May 8, 2019)

ALIProWeb™ is LCSI's PS/ALI update service. This service provides a simple web-based means for private telephone system owners to update the Automatic Location Information in the region's master ALI database of record. A description of the ALIProWeb™ service follows.

- ALIProWeb™ customers can:
 - quickly and easily establish an account portal to upload ALI update files;
 - submit the following file formats via this web portal:
 - NENA2.1 formatted dot.DAT files and
 - LCSI standardized MS Excel spreadsheet files; and
 - Develop AWS CLI/PowerShell scripts to automatically transmit ALI updates to the ALIProWeb™ portal (we will be able to provide assistance after a current heavy initial account provisioning).
- Please note that we will NOT be providing a Graphical User Interface (GUI) at this time. Our goal is to respond as quickly as possible to the immediate PS/ALI service need.
- Customers will be notified that their files have been received.
- Submitted files will be screened for LCSI required file naming standards.
- Submitted files will be screened for errors and omissions.
- Customers will be notified of any initial screening errors.
- ALI update information will be loaded into the region's master ALI database.
- ALI database uploads will be screened for additional errors and omissions.
- Customers will be notified of any additional errors and provided with a status report of accepted or rejected updates.
- Customers will receive a full download of their ALI database records upon request at no additional fee.
